

# DO ~~IT~~ TRY THIS AT HOME

Issue #103

Featuring: **Marvin and Milo**

**What you need:** • Plastic cup • Bendy straw  
• Scissors • Glue or Blu Tack

Hey Milo, try drinking from my home-made water fountain!

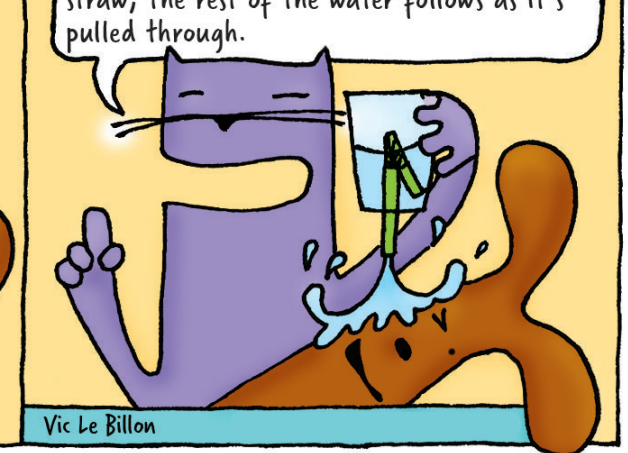

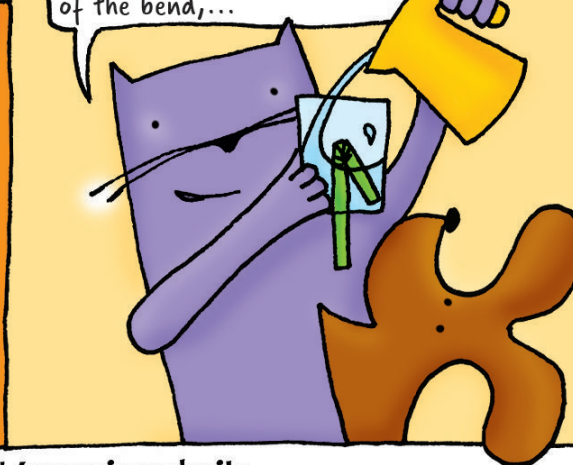

With the scissors make a small hole in the bottom of the cup (you might need a friend to help.)

Push the straw through the hole so the bendy bit is inside the cup.

Glue or use some Blue-Tack to seal the hole and hold the straw in place.

Slowly fill the cup with water. once the water is past the top of the bend,...

...water will start to flow through the straw. once the water begins to flow through the straw, the rest of the water follows as it's pulled through.
