What you need: • A Malteser
• A wine glass (narrower towards the top)

Put the Malteser on the table and place the glass over it.

Wiggle the glass quickly with a circular motion and the Malteser will climb the sides of the glass.

Keeping wiggling, lift the glass off the table and the Malteser will stay inside!

The glass pushes inwards on the Malteser, forcing it to move in a circle rather than a straight line. But the angle of the glass means that it also pushes upwards on the Malteser, supporting its weight.

I bet you can’t lift the Malteser off the table without touching it!
