

DO TRY THIS AT HOME

issue #95

Featuring: **Marvin and Milo**

What you need:

- A sharp pencil
- A small, rectangular piece of thin paper

Milo - watch me make this piece of paper move using just my mind!

Fold the paper in half along the long side and then fold it in half along the short side so that you can find the middle.

Carefully balance the paper on the point of the pencil.

Bring one hand close to the paper and command the paper to move!

The paper starts to spin because the heat of your hand heats up the air. This sets up a convection current in the air, which moves the paper.
