

The electrical home

STEP 1:

Search out all of the different electrical appliances that you have in your house.

STEP 2:

Make a rough list of these appliances.

STEP 3:

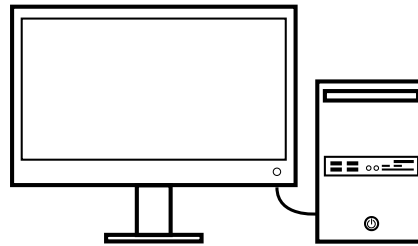

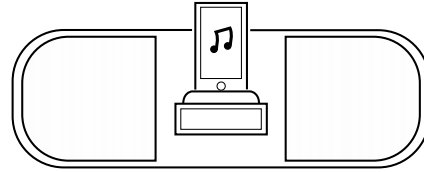

For each appliance make a short note of its job (these will be obvious!)

STEP 4:

For each appliance do your best to find its electrical power output in watts.

STEP 5:

Make a table, as shown below, and list the appliances in order of their power output. Start with the BIGGEST power at the TOP of the table.

Electrical appliance	Power output	What job does it do?

Hints:

1. If you have the same appliance more than once, just make ONE entry in your table (for example: just enter one 100 watt light)
2. Power outputs are sometimes shown:
 - a. somewhere on the outside of the appliance
 - b. in instruction leaflets
 - c. on the internet.
